- Teamwork and effective collaboration.
- Ability to solve problems and make quick decisions.
- Time management and organizational skills.
- Passion for innovation and continuous learning.

## Languages

### Spanish:

Native

### English:

Advanced professional level

## Sobre mí

I am passionate about technology and new challenges, in search of my first formal work experience or internship. I recently completed a frontend development bootcamp through the Powercoders Spain's social program for migrants, where I was selected among over 200 applicants. My curiosity for programming has led me to acquire knowledge in a self-taught manner for a long time. Despite having a degree in culinary arts, I decided to change careers after 10 years, and I am proud of that choice. I am committed to continuous learning, and my main goal is to add value to every project I participate in.

## Experiencia

### Project: "Reportify"

Hack a Boss - 2023

<https://reportifyproject.netlify.app>

The "Reportify" project was an enriching experience where we put our technical and collaborative skills into practice. We worked on implementing various features to enable registered and anonymous users to interact on the platform. These features included:

- Viewing the list of the latest news of the day, sorted by rating.
- Accessing news from previous days.
- Filtering news by topic.
- Logging in.
- Registering by providing name, email, and photo.
- Managing user profiles, including the ability to edit name, email, and photo.
- Posting news articles with title, optional photo, summary, news text, and topic.
- Editing the text of news articles published by the same user.
- Deleting user-published news articles.
- Liking or disliking other news articles.

It was a group project where we utilized various tools and technologies such as HTML, CSS, JavaScript, React, Figma, Bootstrap, Git, Trello, and agile methodologies. These allowed us to develop an interactive news platform with essential features for user engagement.
